

# Grayscale Image Colorization with GAN

---

IE 7615 - Neural Networks & Deep Learning

*Team Members:*

Ansaldo Gabriele  
Kjorholt Ole Martin

Thursday 20th, April 2023

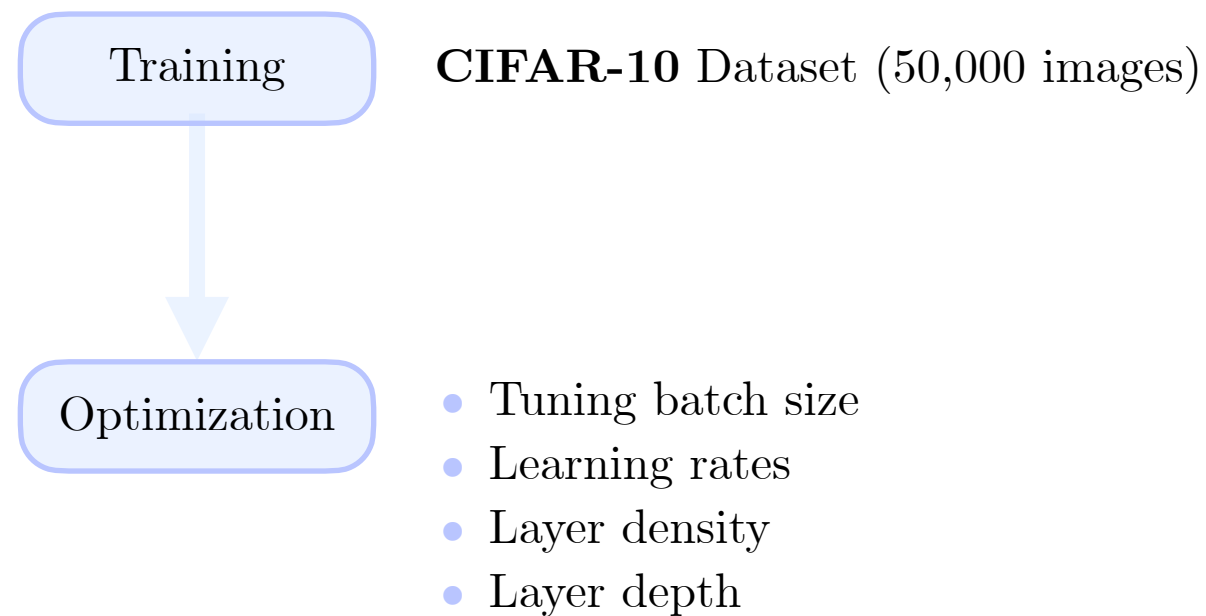

# Motivation

- Automatic image colorization
- Enhance grayscale images  
(i.e. save time and resources  
for artists)
- Pix2Pix GAN: Image-to-image translation
- Relation to existing work: Building upon  
Pix2Pix architecture (Isola et al., 2017)

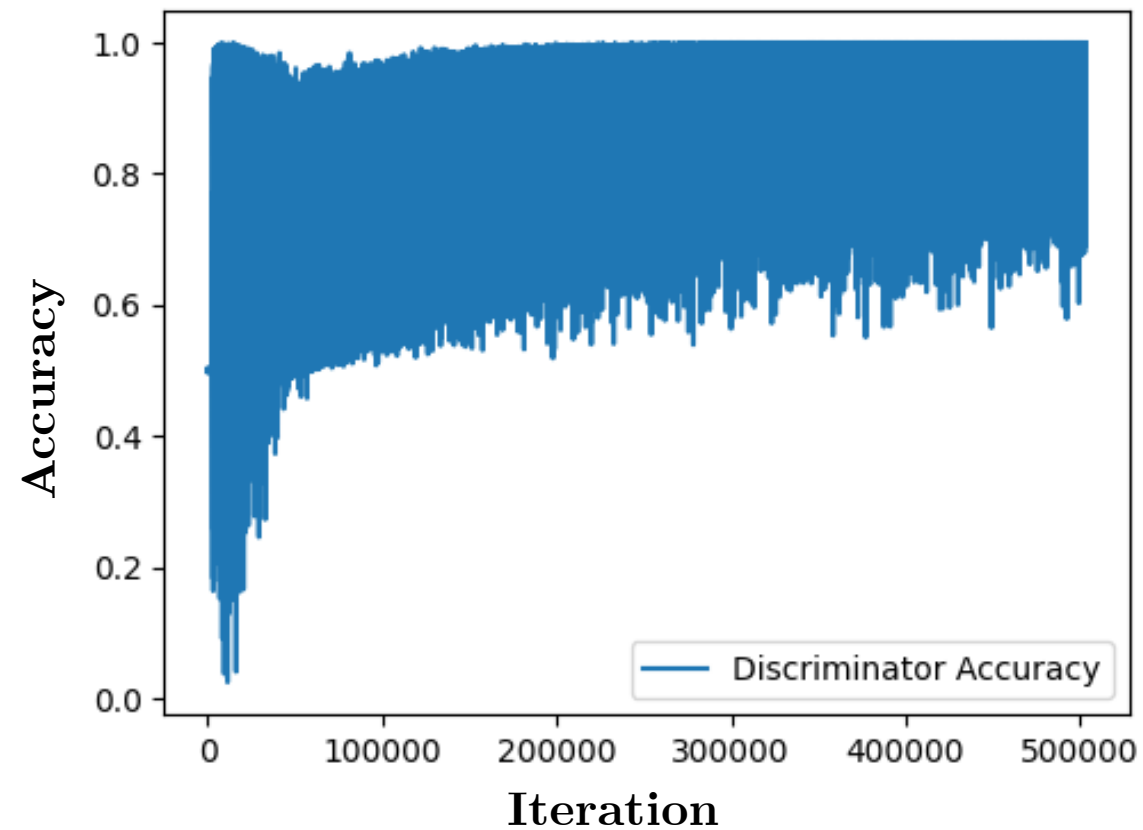

# Approach

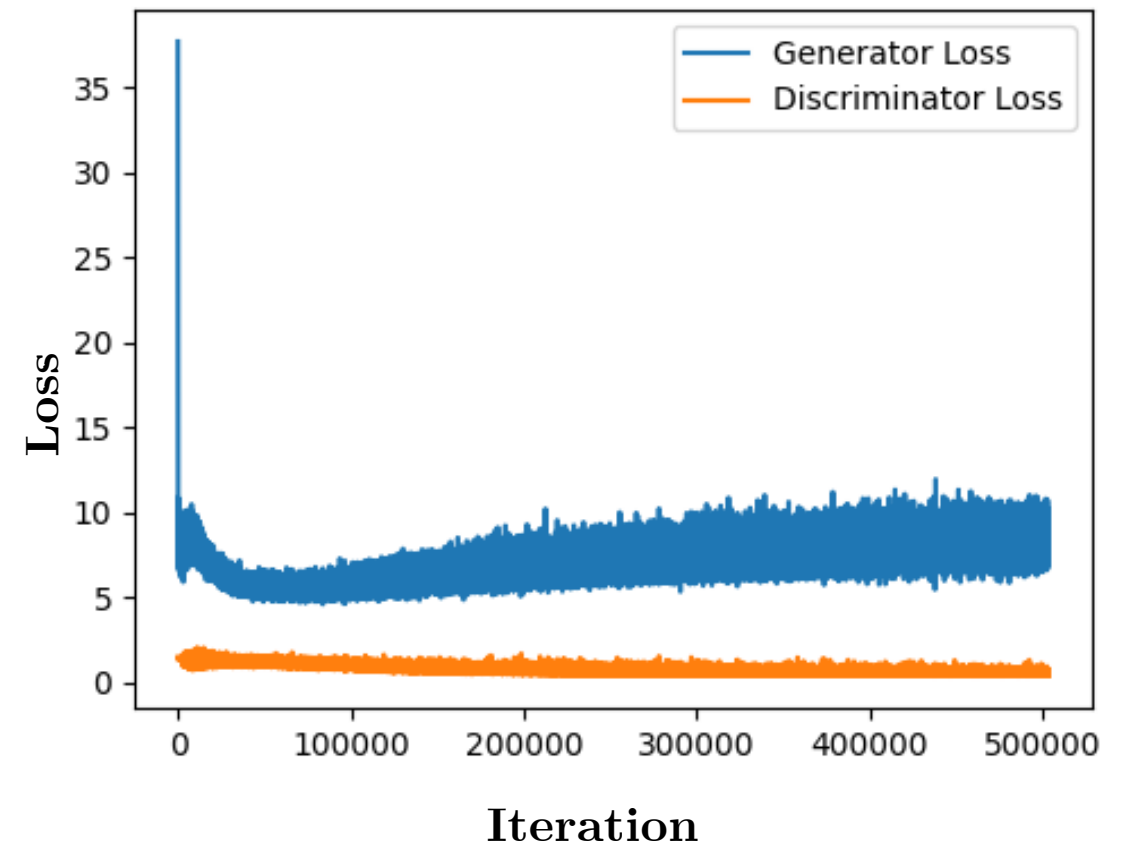

# Results

660 Epochs  $\sim$  50,000 Iterations

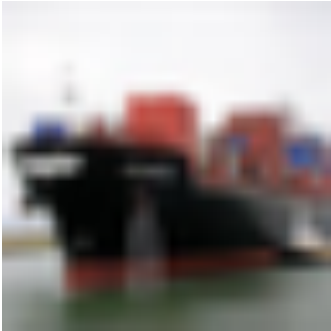

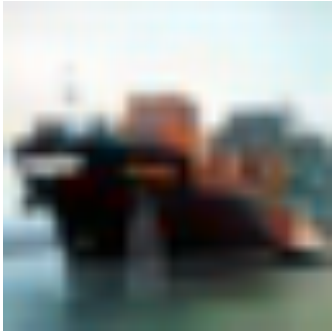

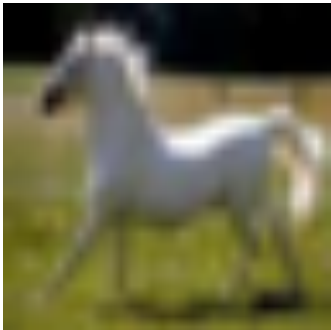

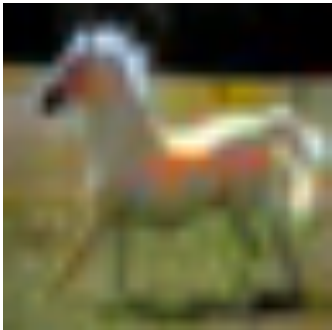

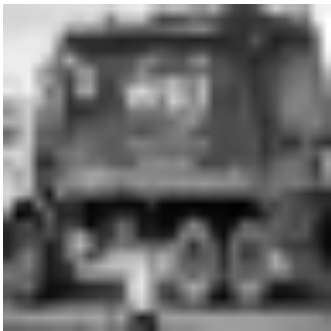

*Accuracy*

*Losses*

# Results

Gray Image	Real Image	Colorized Image	PSNR Score (dB)	SSIM Score
			30.9472	0.9927
			31.0698	0.9972
			32.6258	0.9997
			31.1765	0.9981

# Conclusion

## Achievements

- Plausible colorized images, optimized learning process

## Take-Away

- **Pix2Pix GAN** architecture shows promising potential in image colorization

## Future Directions

- Further parameter tuning
- Exploring higher-resolution images
- Extending to other image-to-image translation tasks

# Thank you for your attention!
